LASIK is the best method in the world for the treatment of the eye diseases such as myopia, astigmatism and hyperopia. There are over 30 million people that underwent LASIK operation throughout the world in the last 30 years. Therefore, LASIK is the most preferred method among the treatments which are used for the eye diseases.

LASIK is a painless, safe, extremely effective and reliable method. Correction time with LASIK is very short (only 5 minutes) and the recovery time is very quick (1 to 2 days). The effects of the treatment are permanent.

LASIK treatment requires broad experience, advanced technology and high quality hospital. Under these conditions, side effects of the treatment are negligible and the results are accurate. LASIK can be applied to those motivated patients that are at least 20 years old and have healthy corneas.
